HOLOSAN®

— 5G ESMOG protect

With the **HOLOSAN 5G Esmog protect**, our neutralizing pulsation is superimposed on the electromagnetic pulsation of 5G WLAN. The artificially generated electromagnetic pulsation is neutralized and is no longer health-challenging for us humans.

[www. 5G-protect.com](http://www.5G-protect.com)

(((5G))) another health challenge for us humans.

Under certain conditions, 5G, as well as WLAN and other artificially generated electromagnetic pulsation or electromagnetic fields, can interfere with or block the naturally occurring electromagnetic fields that are evolutionary parameters and serve for the orientation and regulation of bodily functions [1].

Numerous recognized scientists and medical professionals have already been able to demonstrate in the past that electromagnetic fields can have a significant impact on human health and the environment. The studies and reports of the Competence Initiative [2, 3], the BioInitiative Working Group [4], the European Environmental Agency [5], the Swiss Federal Office for the Environment BAFU [6], the IARC (WHO) [7], the National Institute for the Study and Control of Cancer and Environmental Diseases [8], as well as other internationally recognized research institutions, provide detailed information on the potential health effects of artificial electromagnetic fields on humans.

To protect against 5G and other artificial electromagnetic exposure, we have developed our **HOLOSAN 5G ESMOG protect** based on the well-known principle of superposition [9], which has been used for decades.

Superposition principle (interference): the combination of vibrations or field strengths results in the geometric sum of the partial vibrations or partial field strengths.

With the **HOLOSAN 5G ESMOG protect** our neutralizing pulsation is superimposed on the electromagnetic pulsation of 5G WLAN. The artificially generated electromagnetic pulsation is neutralized and is no longer health-challenging for us humans.

We have tested many products on the market, but none of them showed any measurable emissions on the nano-teslameter. **HOLOSAN 5G ESMOG protect** shows our neutralizing pulsation on the nano-teslameter (ME 3030B - M/E - Analyzer Gigahertz Solutions).

We have tested our **HOLOSAN 5G ESMOG protect** on many people, and the 5G Esmog exposure was significantly reduced within 4-6 weeks. Our Holosan doctors and therapists perform measurements which can be found on our website www.brgoe.at.

The **HOLOSAN 5G Esmog protect** should be placed in front of the 5G WLAN router, so that the neutralizing pulsation can be spread throughout the room using the above-described principle. The neutralizing effect extends to the point where the WLAN reception on mobile devices can be measured/seen.

The **HOLOSAN 5G Esmog protect** can also be used on-the-go, plugged into a pocket close to the body, as protection outside the home [10].

To recharge, simply plug it into the base station. If the battery is insufficient for on-the-go use, please recharge it with a USB-C charging plug.
